(54) Title: METHOD AND SYSTEM FOR CREATING A CONVENIENTLY ACCESSIBLE MEDICAL HISTORY

(57) Abstract: A method and system for creating a conveniently accessible medical history. An information-input node receives medical information and transmits it through an information-transmission connection to a record-creating node, which is remote from the information-input node. The record-creating node is for receiving the information through the information-transmission connection, for configuring it into a medical history record, and for transmitting the medical history record. There is also a record output node, remote from the record-creating node, for receiving the medical history record. The record may be stored on a portable readable storage medium.
